Wuhan-coronavirus homologue map

Kou Amano

Background and Objective

Background: At the beginning of 2020, global risk of infection of coronavirus is spreded. The pandemic started in 2019 and governments announced a state of emergency. In Japan, the government adopted PCR as a diagnosis method of the infection. But the selection of prmers infruence the accuracy greatly. Objective: Therefor, I provide a "map" of homological region of coronavirus to other viruses and annimals to help the primer design.
